## Global Youth Climate Plan *Project Overview*

### How can we as human family prevent dangerous climate change?

#### **Goal**

Development of a 10 Point Plan that outlines how the 2°C limit can still be kept, with suggestions of concrete steps that different actors in society can take.

#### **Strategy**

A Planning Team of global youth as the victims of climate change prepares the plan, based on input from internationally respected research institutes, online discussions and contributions from the broader young public. An Expert Advisory Team advises and supports the young people during this process. The plan is then proposed to political leaders, and it can serve both young and old as strategy for overcoming the climate crisis.

#### **Steps and Milestones**

1. Children & youth of Plant-for-the-Planet invite the world's top climate institutes and think tanks to say how the 2°C limit<sup>1</sup> can still be kept.
2. Planning Team and Expert Advisory Team are formed, funds are raised and a coordination office is set up.
3. Planning Team processes the answers of scientists and considers existing similar plans, works out key questions to be answered by the plan.
4. Brainstorming – generation of new ideas with wide participation of youth worldwide.
5. Planning Team combines ideas to a new 10 Point Plan, Expert Advisors confirm feasibility.
6. Global Conference of Youth finishes and passes the plan with participation of all world regions.
7. Young delegations visit political leaders of key countries to propose the 10 Point Plan. The news of the Plan spreads around the world through media and social networks.
8. Global Citizens worldwide push for the implementation of the measures described in the Plan in their cities and countries.

#### **Partners**

China Youth Climate Action Network (China)  
Desertec Think Tank and Green Security Promotion Team (Germany)  
German Association Club of Rome (Germany)  
Global Contract Foundation (Germany)  
Global Marshall Plan Foundation (Germany)  
Institute for Advanced Sustainability Studies, IASS Potsdam, e.V. (Germany)  
Plant-for-the-Planet Global Board (international)  
Reacción Climática (Bolivia)

---

1 This does not imply that we think that the 2° limit is the best goal. We chose it, because it is politically already accepted as an upper limit by all nations.
